

Make A Paper Plane

Follow these step-by-step instructions to make a fly-tastic paper plane!
All you'll need is one piece of paper!

Step 1: Fold the piece of paper in half in portrait orientation, and then unfold it

Step 2: Fold the top corners down to make an triangle shape at the top of the page and then fold the triangle upside down

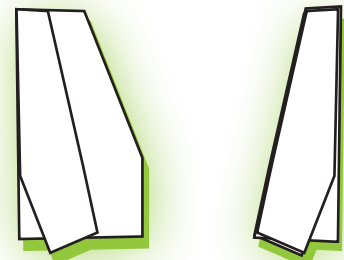

Step 3: Fold the top corners in to create two sideways triangles, and then fold the smaller triangle between the two over top of them

Step 4: Fold along the center line so the folds of the paper are visible

Step 5: Fold the paper so the outside diagonal edge is in line with the straight edge, and then flip it over and do the same on the other side

Step 6: Fly your plane!
